

The brightest fiber coupled semiconductor lasers for pumping solid state and fiber lasers, and direct diode material processing.

With a robust portfolio to meet diverse needs, nLIGHT® element® semiconductor lasers deliver unparalleled brightness and performance for high-volume solid state and fiber laser pumping. These single emitter semiconductor lasers feature a proprietary optical design for efficient fiber coupling. The nLIGHT element platform optimizes cost and performance while allowing you to operate at a wide range of power levels and wavelengths from 793 to 976nm. These semiconductor lasers give you the quality and reliability you and your customers can depend on.

Key Features

- Modular architecture and manufacturing process delivers the industry's brightest diodes.
- Broad selection of optimized configurations allow you to meet your unique needs.
- Special wavelengths give you optimization for most efficient absorption or pumping ranges.
- Wavelength stabilization yields consistent performance across a range of operating conditions.
- nLIGHT reliability produces the uptime and performance you and your customers demand.

Specifications Overview

- Wavelengths: 793, 808, 878.6, 885, 888, 915, 940, 969, 976nm
- Fiber core: 105, 200, 400µm
- Power: 15 – 570W
